2.3 1 Consider the following permutations in S_7

Compute the following products:

b $\tau\sigma$

Ans

$$\tau\sigma = \begin{pmatrix}
1 & 2 & 3 & 4 & 5 & 6 & 7 \\
3 & 2 & 5 & 4 & 6 & 1 & 7
\end{pmatrix}
\begin{pmatrix}
1 & 2 & 3 & 4 & 5 & 6 & 7 \\
2 & 1 & 5 & 7 & 4 & 6 & 3
\end{pmatrix}$$

$$= \begin{pmatrix}
1 & 2 & 3 & 4 & 5 & 6 & 7 \\
2 & 3 & 6 & 7 & 4 & 1 & 5
\end{pmatrix}$$

f $au^{-1}\sigma au$

Ans

$$\tau^{-1} = \begin{pmatrix} 2 & 1 & 5 & 7 & 4 & 6 & 3 \\ 1 & 2 & 3 & 4 & 5 & 6 & 7 \end{pmatrix}$$

$$= \begin{pmatrix} 2 & 3 & 6 & 7 & 4 & 1 & 5 \\ 1 & 7 & 6 & 4 & 5 & 2 & 3 \end{pmatrix}$$

$$\tau^{-1}\sigma = \begin{pmatrix} 2 & 3 & 6 & 7 & 4 & 1 & 5 \\ 1 & 7 & 6 & 4 & 5 & 2 & 3 \end{pmatrix} \begin{pmatrix} 1 & 2 & 3 & 4 & 5 & 6 & 7 \\ 3 & 2 & 5 & 4 & 6 & 1 & 7 \end{pmatrix}$$

$$= \begin{pmatrix} 2 & 3 & 6 & 7 & 4 & 1 & 5 \\ 3 & 7 & 1 & 4 & 6 & 2 & 5 \end{pmatrix}$$

$$\tau^{-1}\sigma\tau = \begin{pmatrix} 2 & 3 & 6 & 7 & 4 & 1 & 5 \\ 3 & 7 & 1 & 4 & 6 & 2 & 5 \end{pmatrix} \begin{pmatrix} 1 & 2 & 3 & 4 & 5 & 6 & 7 \\ 3 & 2 & 5 & 4 & 6 & 1 & 7 \end{pmatrix}$$

$$= \begin{pmatrix} 2 & 3 & 6 & 7 & 4 & 1 & 5 \\ 5 & 7 & 3 & 4 & 1 & 2 & 6 \end{pmatrix}$$

Ans The product of disjoint cycles:

$$\{(1,3,10)(2,4,5,7)(6,8)\}$$

The product of transpositions:

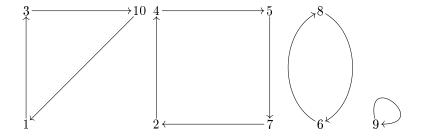

$$\{(1,3,10)(2,4,5,7)(6,8)\} = \{(1,3)(3,10)(2,4)(4,5)(5,7)(6,8)\}$$

Reconstructing the permutation based on the product of transpositions:

$$\sigma = \begin{pmatrix} 1 & 2 & 3 & 4 & 5 & 6 & 7 & 8 & 9 & 10 \\ 3 & 4 & 10 & 5 & 7 & 8 & 2 & 6 & 9 & 1 \end{pmatrix}$$

$$= \begin{pmatrix} 1 & 3 & 10 & 2 & 4 & 5 & 7 & 6 & 8 & 9 \\ 3 & 10 & 1 & 4 & 5 & 7 & 2 & 8 & 6 & 9 \end{pmatrix}$$

Constructing the associated diagrams

The inverse of the permutation:

$$\sigma^{-1} = \begin{pmatrix} 3 & 4 & 10 & 5 & 7 & 8 & 2 & 6 & 9 & 1 \\ 1 & 2 & 3 & 4 & 5 & 6 & 7 & 8 & 9 & 10 \end{pmatrix}$$
$$= \begin{pmatrix} 1 & 2 & 3 & 4 & 5 & 6 & 7 & 8 & 9 & 10 \\ 10 & 7 & 1 & 2 & 4 & 8 & 5 & 6 & 9 & 3 \end{pmatrix}$$

Since

$$\begin{split} o(\sigma) &= lcm(\text{length(cycles)}) \\ &= lcm(\{2,4,3\}) \\ &= 12 \end{split} \end{substitute}$$

5 Let $3 \le m \le n$. Calculate $\sigma \tau^{-1}$ for the cycles $\sigma = (1, 2, \dots, m-1)$ and $\tau = (1, 2, \dots, m-1, m)$ in S_n .

Ans Given

$$\tau = \begin{pmatrix} 1 & 2 & 3 & \dots & m-2 & m-1 & m \\ 2 & 3 & 4 & \dots & m-1 & m & 1 \end{pmatrix}$$

$$\tau^{-1} = \begin{pmatrix} 2 & 3 & 4 & \dots & m-1 & m & 1 \\ 1 & 2 & 3 & \dots & m-2 & m-1 & m \end{pmatrix}$$

$$= \begin{pmatrix} 1 & 2 & 3 & 4 & \dots & m-1 & m \\ m & 1 & 2 & 3 & \dots & m-2 & m-1 \end{pmatrix}$$

Therefore the product

$$\sigma \tau^{-1} = \begin{pmatrix} 1 & 2 & 3 & \dots & m-2 & m-1 \\ 2 & 3 & 4 & \dots & m-1 & 1 \end{pmatrix} \begin{pmatrix} 1 & 2 & 3 & \dots & m-1 & m \\ m & 1 & 2 & \dots & m-2 & m-1 \end{pmatrix}$$

$$= \begin{pmatrix} 1 & 2 & 3 & \dots & m-1 & m \\ m & 2 & 3 & \dots & m-1 & 1 \end{pmatrix}$$

$$= (1, m)$$

11 Prove that in S_n , with $n \geq 3$, any even permutation is a product of cycles of length three.

Hint: (a,b)(b,c) = (a,b,c) and (a,b)(c,d) = (a,b,c)(b,c,d).

Ans To show any even permutation in S_n , with $n \geq 3$ is a product of cycles of length three, consider the case where the pair of transpositions are disjoint:

$$(a,b)(c,d) = (a,b,c)(b,c,d)$$

The product yields cycles of length three.

The other case would be the transpositions consisting of repeating elements, such as

$$(a,b)(b,c) = (a,b,c)$$

where the product yields cycles of length three as well.

15 For $\alpha, \beta \in S_n$, let $\alpha \sim \beta$ if there exists $\sigma \in S_n$ such that $\sigma \alpha \sigma^{-1} = \beta$. Show that \sim is an equivalence relation on S_n .

Ans To prove reflexivity, let $\alpha=1_S$ Then,

$$\sigma \alpha \sigma^{-1} = \sigma \sigma^{-1} \cdot 1_S$$
$$= 1 \cdot 1_S$$
$$= \alpha$$

for any $\alpha \in S_n$

Therefore, $\alpha \sim \alpha$

To prove **symmetry**, let $\alpha \sim \beta$

Then, there exists $\sigma \in S_n$ such that $\sigma \alpha \sigma^{-1} = \beta$

Thus

$$\sigma \alpha \sigma^{-1} = \beta$$

$$\Rightarrow \sigma^{-1} \sigma \alpha \sigma^{-1} = \sigma^{-1} \beta$$

$$\alpha \sigma^{-1} = \sigma^{-1} \beta$$

$$\Rightarrow \alpha \sigma^{-1} \sigma = \sigma^{-1} \beta \sigma$$

$$\alpha = \sigma^{-1} \beta \sigma$$

$$\Rightarrow \alpha = \sigma^{-1} \beta (\sigma^{-1})^{-1}$$

Or $\sigma^{-1}\beta(\sigma^{-1})^{-1}=\alpha$

Implying $\beta \sim \alpha$

The prove **transitivity**, let $\alpha \sim \beta$ and $\beta \sim \gamma$

Then, there exists $\sigma_1, \sigma_2 \in S_n$ such that $\sigma_1 \alpha \sigma_1^{-1} = \beta$ and $\sigma_2 \beta \sigma_2^{-1} = \gamma$

Then $\sigma_2 \sigma_1 \alpha \sigma_1^{-1} \sigma_2^{-1} = \gamma$,

Or $(\sigma_2 \sigma_1) \alpha (\sigma_1 \sigma_2)^{-1} = \gamma$

Thus, $\alpha \sim \gamma$

Therefore, \sim is an equivalence relation on S_n

16 View S_3 as a subset of S_5 , in the obvious way. For $\sigma, \tau \in S_5$, define $\sigma \sim \tau$ if $\sigma \tau^{-1} \in S_3$.

a Show that \sim is an equivalence relation on S_5 .

Ans To prove **reflexive**, let $\sigma \in S_3$

Then,

$$\sigma\sigma^{-1} = 1_{S_3} \in S_3$$

Thus, $\sigma \sim \sigma$

To prove **symmetric**, let $\sigma, \tau \in S_3$

Then

$$\sigma \sim \tau \in S_3$$

$$\Rightarrow \sigma \tau^{-1} \in S_3$$
$$\Rightarrow (\sigma \tau^{-1})^{-1} \in S_3$$
$$\Rightarrow \sigma^{-1} \tau \in S_3$$

Thus, $\tau \sim \sigma$

To prove **transitivity**, let $\sigma, \tau, v \in S_3$.

Then, $\sigma \sim \tau \Rightarrow \sigma \tau^{-1} \in S_3$

and $\tau \sim v \Rightarrow \tau v^{-1} \in S_3$

Thus,

$$(\sigma\tau^{-1})(\tau v^{-1}) \in S_3$$
$$\sigma(\tau^{-1}\tau)v^{-1} \in S_3$$
$$\sigma v^{-1} \in S_3$$
$$\Rightarrow \sigma \sim v \in S_3$$

Therefore, \sim is an equivalence relation on S_5

b Find the equivalence class of (4, 5).

Ans Since $(4,5) \in S_3$, $\Rightarrow (4,5)(5,4) \in S_3$ and $(4,5) \sim (4,5)$ Similarly,

$$(4,5)(1,2,3)(5,4), (4,5)(1,3,2)(5,4) \in S_3$$

and

$$(4,5)(1,2)(5,4), (4,5)(1,3)(5,4), (4,5)(2,3)(5,4) \in S_3$$

Therefore,

$$[(4,5)] = \{(4,5), (1,2,3)(4,5), (1,3,2)(4,5), (1,2)(4,5), (1,3)(4,5), (2,3)(4,5)\} \qquad \square$$

c Find the equivalence class of (1, 2, 3, 4, 5).

Ans Since

$$(1,2,3,4,5)=(1,2)(1,3)(1,4)(1,5) \label{eq:condition}$$
 and $(1,2)(1,3)(1,4)(4,1)(5,1)=(1,2)(1,3)$

 $\in S_3$

Then $(1,2,3,4,5) \sim (1,4)(1,5)$ Similarly,

$$\{(1,2)(1,3)(1,4)(4,1)(5,1)(1,3,2),$$

$$(1,2)(1,3)(1,4)(4,1)(5,1)(1,2),$$

$$(1,2)(1,3)(1,4)(4,1)(5,1)(1,3),$$

$$(1,2)(1,3)(1,4)(4,1)(5,1)(2,3),$$

$$(1,2)(1,3)(1,4)(4,1)(5,1)(1,2,3)\} \in S_3$$

Therefore,

$$[(1,2,3,4,5)] = \{(1,4)(1,5)(1,3,2), (1,4)(1,5)(1,2),$$

$$(1,4)(1,5)(1,3), (1,4)(1,5)(2,3), (1,4)(1,5)(1,2,3)\} \quad \Box$$

d Determine the total number of equivalence classes.

Ans S_3 contains 3!=6 elements, and S_5 contains 5!=120 elements

Therefore, the number of equivalence classes are 120/6=20
