Question: 08

DATE: October 6, 2017 Sabbir Ahmed

1 Background

Repeat (7) with with blocking statements converted to non-blocking statements. Discuss your observation.

2 Implementation

The provided code was directly used to implement the module in Part 8, and can be found in the 'scripts' directory. **\$display** statements were added after each assignment statements and all the blocking statements were replaced with non-blocking statements in the module.

A sample of the waveform generated is provided:

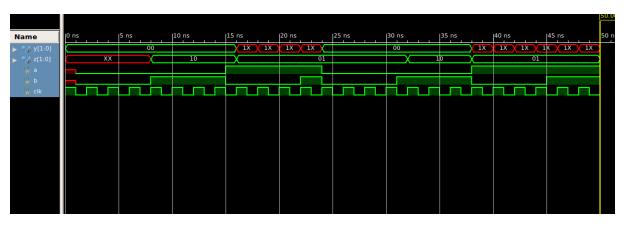

Figure 1: Waveform Generated from Part 8 Test Bench

The following output is dumped from the test bench as well, demonstrating the effects of non-blocking assignments:

3 Observations

The replacement of blocking statements with non-blocking assignment statements resulted in the same output, except they wait for all the outputs to be ready.
